| Other Information  |
|--|
| <p>Lizzie has been treated for URI (upper respiratory infection) since 12/28/23. Clavamox was recommended. Emergency care evaluation 1/6/24 revealed 4/6 parasternal murmur, nasal discharge and enlarged abdomen. Radiographs and ultrasound were within normal limits other than a colon full of diarrhea. Parvovirus test was negative. Azithromycin was prescribed for persistent URI symptoms, along with nasal saline or cerenia drops. Panacur was recommended for possible abdominal parasites. Bloodwork was noted as being within normal limits (WNL) for a kitten. Bloodwork was repeated 1/17/24 at pre-op appt. WNL yet alb:glob ratio was 0.58; asymptomatic for Feline infectious peritonitis (FIP). ProBNP test for the heart was negative. Grade 2-3 heart murmur was noted. Prescribed doxycycline for persistent URI.</p> |
